EXPERIENCE

Evite, L.A., CA—Senior Front End Developer

June 2018 - PRESENT

Working as a part of the tech team, Writing modular, scalable code with a focus on reusability and simplicity, creating README.MD files for components that can be used in different modules.

Creation of unit testing using Jest.

Worked together with the Product Team and QA to provide feedback, and establish commitments at the beginning of each sprint.

Working under Agile methodology

Technologies: ReactJS, SASS, Python, GIT

20th Century Fox, L.A., CA — Senior Front End Developer

September 2016 - May 2018

Main Front End developer of a new internal web application for the Shared application team, used by several departments (Writers/ Directors / Casting / Creative).

This web app lets the casting department to create lists for their projects, and search for actors who can match their characters. Send a script to the actor's email, and change those lists until they have a finalist.

The creative department has access to all of the possible projects called "drafts" and chooses writers so the assigned writer will have to read that draft and create a synopsis and send it back to creative giving a recommendation

In this project, I worked together with Product owners and QA in an agile methodology.

As the primary front end developer of this project, I had to choose some of the technologies we used, like SASS and GULP.

Technologies: Angular 2~5, Typescript, SASS, GULP, GIT

SKILLS

Javascript - 11 Years

PHP - 8 Years
